Appendix C: Definitions of Growth Models⁶

Gain Score Model

The Gain Score model is most aligned with what is known as the "simple" model of growth.

The gain score model quantifies changes in student scores on a particular assessment. For example, if a test produces scores on a 100-point scale, and a student received a score of 70 at time 1, and 80 at time 2, then the gain score would be 10 points. That gain is conceptualized as:

$$Gain = X_2 - X_1$$

where X_2 represents that score at time 2, and X_1 represents the score at time 1. The underlying assumption, of course, is that the scores are on the same scale, to make the difference meaningful. This

would imply either that the scores are obtained on a single assessment or that the scores are on the same scale.

distribution of scores of "academic peers" his/her score falls. For example, a student with an SGP of 60 performed better than 60% of his/her hypothetical peers predicted to have similar test score histories. Many students may receive an SGP of 60, but that does not mean that the change in the performance of

those students is the same. Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Some of them may have had a score of 60 in the previous year, while others may have had a score of 40 or 80.

Appendix A: New York State Learning Standards

The New York State Learning Standards are adopted by the New York State Board of Regents for educational purposes including assessment, curriculum, and professional learning.

For the purposes of this RFQ Applicants must demonstrate that the assessment is aligned with the New
